Fountain View Hall's management tool `fvh-manager` is used to manage reservations at Fountain View Hall

USER GUIDE

This guide will walk you through `fvh-manager` and covers topics such as how to install and use `fvh-manager`.

1.1 Installation

1.1.1 User Prerequisites

To verify you meet all prerequisites, run:

```
uv --version
```

Expected output:

```
uv 0.x.x
```

Not:

```
command not found: uv
```

Important

Make sure the `uv` command runs before running the program.

If `uv --version` fails, use [this guide](#) to install `uv`.

1.1.2 Minimal Getting Started

Make sure you run these commands from the project directory

Run this once:

```
uv sync
```

Then run this to start on every subsequent run:

```
uv run fvh-manager
```

1.1.3 Activate Completion by Operating System and Shell

If desired, you can activate shell completions by running one of the following commands, depending on your operating system and shell:

Operating system	Shell	Activation command
Linux/macOS	Bash	<code>source completions/fvh-manager.bash</code>
Linux/macOS	Zsh	<code>source completions/_fvh-manager</code>
Linux/macOS	Fish	<code>source completions/fvh-manager.fish</code>
Windows	PowerShell	<code>. .\completions\fvh-manager.ps1</code>

Once shell completions are activated, make sure your virtual environment is active. You can then run the program with:

```
fvh-manager
```

To view available completions, type:

```
fvh-manager <tab>
```

1.2 Developer Installation

Meet all previous *prerequisites* and additional ones as specified bellow.

Install developer dependencies:

```
uv sync --all-groups
```

Verify that `pdflatex` is installed:

```
pdflatex -v
```

Verify that `git` is installed:

```
git -v
```

Verify that `lefthook` is installed:

```
lefthook -v
```

REFERENCES

Name: Derek R. Neilson Description: This is the entrypoint and should is left light by design.

Info on Type. Typer is a command line interface (CLI) tool that will be used thought this project. It defines some decorators `@app.command` see <https://typer.tiangolo.com> for details.

`src.main.main()`

Return type

None

The design process has been documented quite thoroughly but not all decisions are documented
Plan for Fountain View Hall

3.1 Overview

Fountain View Hall wants a program that tracks event attendance and projected revenue for multiple bookings.

3.1.1 Program Requirements

- Repeatedly prompt for event name, guest count, and estimated revenue
- Continue until the user enters “done”
- Track total events processed
- Track total guests
- Track total projected revenue
- Calculate the average guests per event
- Determine the largest event

3.1.2 Business Rules

- Pricing Rules
 - Large events receive a discount
- Operational Rules
 - Every booking must include a guest count
 - Booking total must be calculated before the discount is applied
 - Revenue totals should be tracked

3.2 Planed Technology Usage

I planned on using various technologies throughout this project some are very necessary others save time. Each technology will be categorized and described below:

3.2.1 Editing/Developer Tools

- *Git* and *GitHub* as a VCS (version control system).¹
 - *uv* for package, project, and environment management.
 - *lefthook* as a Git hook manager.
 - *pre-commit* to run pre-commit scripts.²
 - *ruff* for Python linting and formatting.
 - *Sphinx* to help build this beautiful documentation.
-

3.3 References Used to Make This Project

ReStructuredText guides were used as references for this project (see footnote).¹

Note

I had zero rst experience before reading these guides they were very helpful.

The [Typer home page](#) was used for learning about Typer and was integral to getting the CLI up.

¹ Go to the [project repo](#) to see commit history.

² All scripts (in scripts directory) are written for unix systems and use the bash language.

¹ reStructuredText guides: reStructuredText Markup Specification, reStructuredText Primer, reStructuredText Primer by Material for Sphinx, and reStructuredText Primer by Sphinx Note: they all are missing some info that others have except for reStructuredText Markup Specification which is very dense and lacks rendered examples.
